

Please do not block XM Radio from offering traffic and weather service. There are many times when I cannot receive the AM signal from a local station or their traffic report is not timely enough. The continuous update from XM Radio is invaluable to me. Driving in the Los Angeles area is very difficult to begin with because of all the traffic congestion. Instantaneous current traffic reporting is a huge help. Please do not stop the valuable service to public. I know that broadcast stations feel this is competition for them. But competition is good. It encourages everyone to improve their service and the public benefits.

Thank you for your consideration.
